Sub: - Performance report of ZETA – 222 Compressor oil

Machine /Equipment
Rotary Compressor

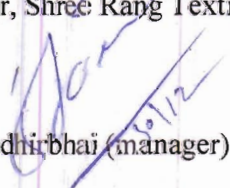

We are thankful to you for studying our problem and suggesting the proper Solution for that. Having closely monitored the application and performance of superior, ZETA -222, I wish to share with you the encouraging result of the same.

Before using Zeta – 222, we were using Servo – 68 grade oil in the same equipment and we used to change the oil every two month .The oil used to become black and we had to do top up every 7 to 15 days.

But after the introduction of the ZETA -222 Compressor oil one year ago for the same equipment, we are happy to say that the oil is still working fine without any change. Oil is still in good condition.

We are highly satisfied with the result of ZETA-222 and we recommend it for the same Application.

Yours Faithfully,
For, Shree Rang Textile Processors
